**HELP WITH DRYING THE LP  
AND  
IMPROVING WATER QUALITY**

After using the Jet hose leave the LP on the mandrel and remove the mandrel from the sink and shake as much of the water off of the LP as possible.

Dry the LP on the mandrel with a cotton cloth ( Gerber flat fold diaper) or a microfiber towel ( Ultra Terry 300 medium from [www.microfibertech.com](http://www.microfibertech.com) ). When cleaning the drying cloths do not use fabric softener.

If you consider your water contaminated I recommend the Culligan RV-800 filter. [www.culligan-store.com](http://www.culligan-store.com)
