

The Super Solution

These questions have been asked:

Can the Super Solution Cleaner Fluid be used with other LP cleaning Machines? The answer is NO.

The reason is: The GEM Dandy Hydraulic Cleaning Apparatus is the only cleaning system that by rinsing with fresh water completely removes all residue of the Super Solution (cleaning agent).

Vacuum systems do not rinse and leave cleaning agent residue. The dip tank cleaners leave even more of the cleaning agent on the LP.

The Super Solution is formulated with detergent degreasers that remove the mold release agent (a form of grease lubricant used during the stamping process). The Super Solution is like a strong car wash detergent but formulated for vinyl. It like car wash is biodegradable.

Can other cleaning agents be used with the GEM Dandy Hydraulic Cleaning Apparatus? The answer is YES. But the cleaning action will be diminished. The Super Solution is the strongest cleaning agent.
